

**Figure 1.** Postage stamps of the SDSS DR7 and INT red-green-blue composite images of the 260 E and S0 galaxies of the ATLAS<sup>3D</sup> sample, sorted by name. The image of each galaxy was scaled so that the plot side is equal to  $10R_e$ , where  $R_e$  is the projected half-light radius. (From Cappellari et al. 2011)
